

CASE STUDY: PAYROLL CAPACITY

Finance Analyst gains over 1 week of capacity with help of Kimedics

Customer Profile: 100+ physician practice in hospital medicine, emergency medicine and critical care medicine with multiple locations and shift differentials.

Impact: 6 days+ per month saved for analyst (over 54 hours/month)

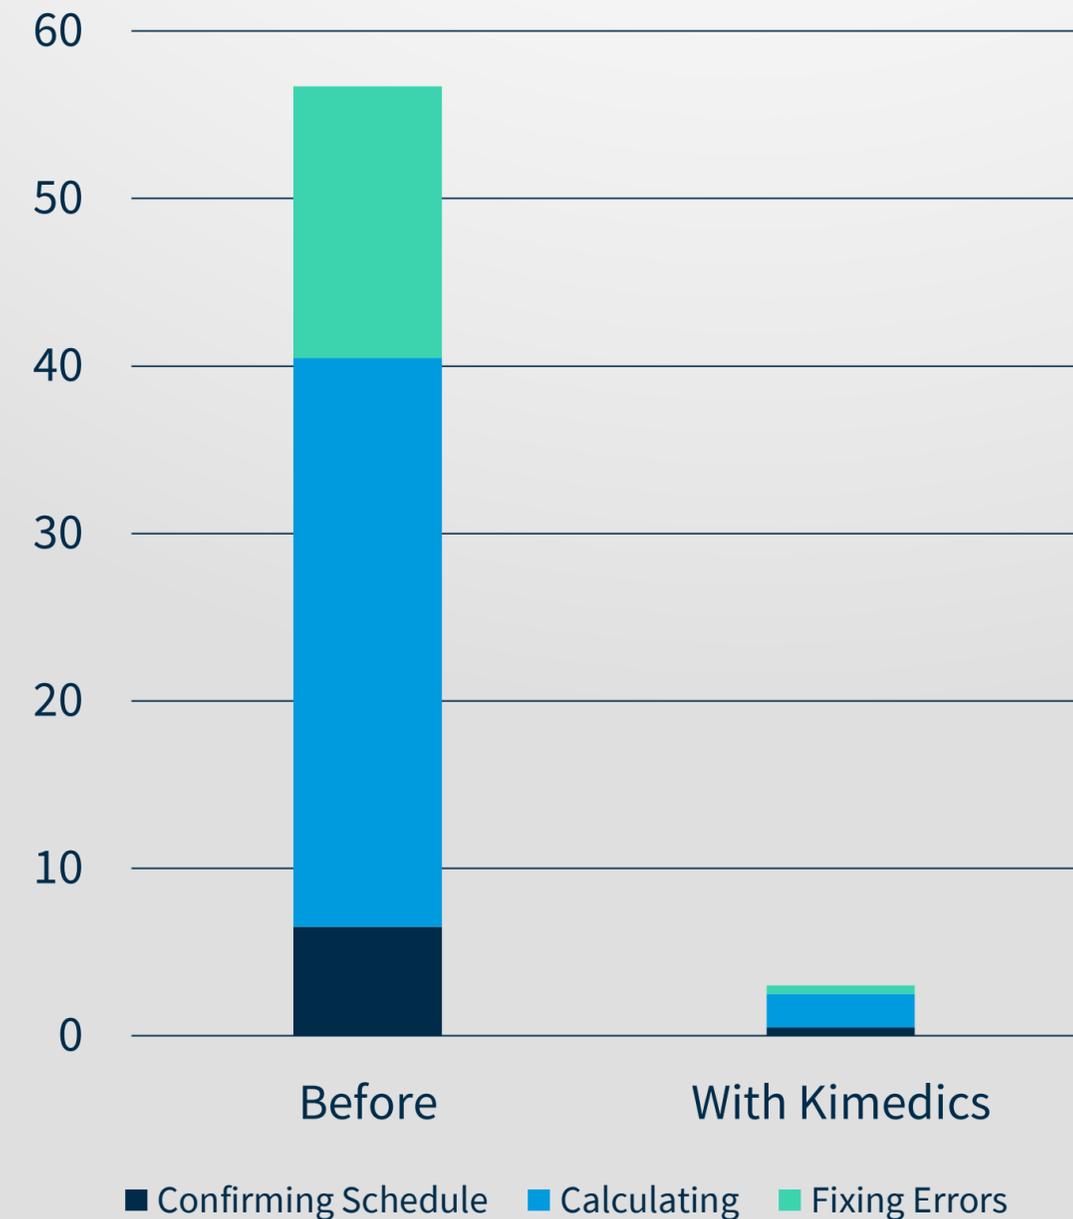

What happened?

Using Kimedics rate management tools and provider time submission the group was able to save the analyst time in several ways:

1. **Accurate schedule saved 6 hours/month.** Because the schedule is error prone to swaps and transfers not getting reported, analyst was validating schedule looked correct prior to running payroll.
2. **Pay calculations saved 32 hours/month.** Checking and processing rate differentials across multiple sites was manually and error prone prior to using Kimedics. After implementing Kimedics, the analyst exported a report that automated his calculation files.
3. **Payroll Error reduction saved 16 hours/month.** Providers confirmation of schedule and OT/call in ensured that payroll was processed right the first time – with no need to research and issue correction pay.

Please note that due to a non-disclosure agreement we cannot share the company name with this case study.

Payroll Analyst Hours per Month

Are you looking for technology that can increase efficiency and financial visibility for your physician organization?

We are on a mission to automate the most time-consuming tasks for physician groups, here are a few we help with -

- ❑ Roster management
- ❑ New privileges tracking and templates for meetings and document requirements
- ❑ Expiration tracking for privileges, licensure and other credentials
- ❑ Scheduling
- ❑ Rate Management and differentials tracking
- ❑ Financial Analysis and Opportunity identification
- ❑ Document storage/form auto-filling and e-sign
- ❑ Collaboration – for vendors or other 3rd party relationships (VMS alternative)
- ❑ Provider web and mobile portal for scheduling and credentialing self-service
- ❑ Real-time revenue and net cost per shift estimates based on encounter and rvu volume
